

More people are using vanpools

Soaring growth in past 2 years

"This is a significant and very positive gain in a short time. The results in San Joaquin, Stanislaus and Merced counties show that we're shifting commuter behavior from that of driving alone to using smart travel alternatives, such as vanpools. That reduces greenhouse gases, improves air quality and reduces traffic congestion."

-- **Yvette Davis**, SJCOG's senior program specialist in charge of the dibs program

VANPOOLS

More people are using vanpools to get to and from work. There were

157%

more vanpools in 2020-21 than in 2018-19.

COMMUTERS

In 2018-19, there were 8,995 commuters using vanpools. Now there are

11,267

commuters traveling in and out of San Joaquin, Stanislaus and Merced counties.

REDUCING CONGESTION

More vanpools mean reduced traffic congestion because

1,866

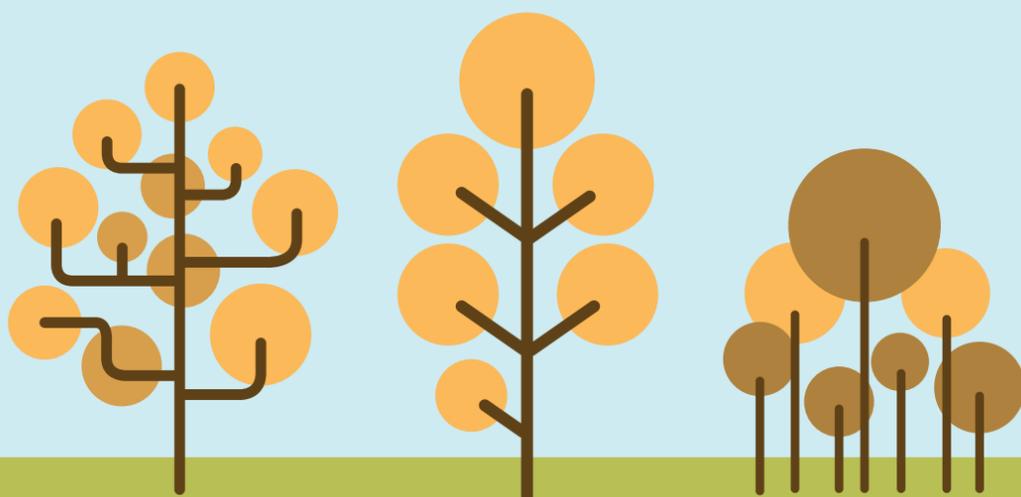

vehicles are off the road.

REDUCING POLLUTION

More vanpools mean reduced greenhouse gas emissions. In 2020-21, that meant a savings of

31

tons of CO2.
